

**The Internet Pilot Planning Centre (IPPC)** is an Internet based Norwegian aeronautical briefing system hosted by Avinor Air Navigation Services AS.

**Information provided by the IPPC is retrieved from:**

- **the Norwegian Aeronautical Information System in "real time".**
- **[www.met.no](http://www.met.no)**
- **Eurocontrol EAD services**

**However, Avinor will not accept responsibility for corruption or changes to data which might take place in the Internet transport system.**

Request for briefing via IPPC will contain information updated to the time of production of the report - thus enabling inclusion of the latest NOTAM, SNOWTAM and MET information, including SPECI and SIGMET/ICE messages and Weather charts.

**Note:** NOTAM will not be included in the reports if their "valid from" time is more than 24 hours into the future. "Valid to" time will be included in the PIB entry if the expiry time is less than 24 hours into the future. PIB entries that appear on briefings for the first time "today" will be marked as "new today".

**If you experience any technical difficulties with IPPC, please e-mail using this link : [Ippc - Avinor AS](#)**
